

Endace and Kapsch CarrierCom announce partnership

Partnership to deliver innovative network monitoring solutions for major Telcos

Auckland, New Zealand – July 28, 2009 - Endace Limited (LSE/AIM: EDA), a recognised developer of high speed packet capture networking technology, today announced it has entered into a technology partnership with Kapsch CarrierCom AG, a leading provider of communications services to major European network operators. Kapsch CarrierCom AG is Austria's leading telecommunications specialist, with clients throughout Central and Eastern Europe.

Specialising in mobile, wireline and wireless networks, Kapsch CarrierCom has deep expertise in the design, implementation and maintenance of sophisticated, high-speed networks. Under the newly announced partnership Endace and Kapsch CarrierCom will work together to provide next generation monitoring solutions.

These solutions harness the power of Kapsch CarrierCom's application software running on top of Endace's hardware and software platform. The Endace platform enables guaranteed capture of all network packets, of any size, on any network interface, up to speeds of 40Gb/s.

"As a globally recognised supplier of high-speed, network monitoring solutions, Endace is a natural partner for Kapsch CarrierCom. Our customers operate complex, very high-speed networks and Endace's hardware and software platform is a very good fit with Kapsch CarrierCom's expertise and range of solutions. We see Endace as an important part of our solutions ecosystem," says Thomas Schöpf, Board Member from Kapsch CarrierCom.

Mike Riley, CEO of Endace, says Kapsch CarrierCom is a great example of the sorts of innovative companies Endace is partnering with.

"In today's increasingly competitive market where service quality, legal regulations and performance are paramount, operators need better performing and more effective monitoring solutions. Kapsch CarrierCom understands this, and so does Endace. As network bandwidth and complexity increase, operators are finding it increasingly difficult to monitor and manage their networks with existing solutions. Working together, Kapsch CarrierCom and Endace are able to provide extremely attractive solutions to these urgent problems," he says.

About Endace

For organisations that rely on their data networks to do business, Endace provides high performance traffic analysis, latency measurement, network security and application acceleration solutions that capture, inspect and report on every single data packet. Our product portfolio includes high-speed packet capture technology, open development environments, multi-function network monitoring appliances and a comprehensive range of powerful yet intuitive management, measurement, alerting and analysis applications. These products provide the broadest, most capable range of packet capture technology, for any interface, speed or packet type. We enable our customers to be confident in their service performance, traffic monitoring, information security, and regulatory compliance. Based in Auckland, New Zealand, Endace also has offices in the UK, USA and Singapore. Quoted on AIM, the stock code is LSE: EDA.
