

ENDACE LAUNCHES APPLICATION & CHANNEL PARTNER PROGRAMS
Industry leaders in information security, network management, and financial services team with
Endace to deliver world class solutions.

March 20, 2007-Washington, DC-FOSE- Endace Limited (LSE/AIM: EDA), a world leader in network monitoring solutions, today announced that it has launched two partnership programs for network systems integrators and network security and monitoring software vendors to team with Endace to promote joint solutions to Telco, Financial, and Government markets worldwide. Endace is bringing these software vendors and systems integrators together collaboratively to deliver seamless solutions for end customers who now also have the opportunity to benefit from the NinjaProbe family of application-independent appliances announced by Endace today.

The Endace Application Partner program enables software vendors to extend the addressable market for their solutions by leveraging the core-to-edge connectivity provided by Endace's DAG card and NinjaProbe network monitoring solutions. Endace's open architecture enables rapid porting of applications to take advantage of Endace's 100% traffic capture, CPU offload and real-time packet filtering capability.

"Narus is the global leader in carrier-class security for the world's largest IP networks," said Steve Bannerman, VP of Marketing and Product Management at Narus, the founding member of the Endace Application Partner Program. "As one of Endace's earliest and largest customers, we're excited to be an inaugural member of their new Application Partner Program. Narus delivers the industry's most scalable, high-performance security solution on top of Endace's DAG platform. We are continuing to push the limits of the DAG technology in this extremely demanding market and broaden our dominant installed base in the carrier market."

In addition to the Application Partner Program, Endace's Channel Partner Program provides significant new business opportunities to leading network systems integrators and VARs by enabling them to deliver lossless data capture and content inspection solutions using a wide range of pre-qualified software applications. Endace's channel partners provide integration, deployment and ongoing maintenance services to end users to ensure quick time-to-value and responsive field support. Endace provides its channel partners with lead generation programs, competitive pricing, and premium technical support ensuring smooth project delivery.

Darrell Covell President of Rep-tron IT Solutions, an inaugural member of Endace's Channel Partner Program, noted, "Rep-tron has deep experience in providing network security and intelligence systems to government agencies in the United States. We are very pleased with Endace's proactive partnering approach as this enables us to easily integrate leading application software with Endace products, and deliver solutions with the best price/performance outcome for our customers."

Additional software vendors that have engaged with Endace and its fast-growing team of channel partners include: Q1Labs, NetWitness, Nexvu Technologies, Seanet Technologies, and TS-Associates.

Brian Girardi, Director of Product Management for NetWitness said, "As a network forensics company, it was crucial that we had 100% data capture. Endace provided us the performance, and the ease of integration that we needed in our existing products, and we know that Endace will continue to support us with new features/products as we innovate in the security market."

Mark Scott, Director of Engineering for Nexvu Technologies commented, "I am very excited about our relationship with Endace and the high performance capabilities that our combined solution provides. Our customers' networks continue to increase in capacity and our product's performance monitoring capabilities must grow to meet the demand. Partnered with Endace's hardware, we believe our product now leads the industry not only in features, but also in performance and scalability."

Henry Young, Director of Product Development for TS-Associates plc noted, "Endace's technology enables our 'TipOff' appliance product to capture, measure and analyse in real time, all messaging traffic that comprises the life blood of financial institutions' trading systems, with greater performance and precision than any other technology available today. Endace's application partner model is enabling us to work side-by-side with Endace to provide our customers significant competitive advantage by ensuring the operational integrity of their trading systems."

To find out more about Endace's Application Partner and Channel Partner programs, please contact Heath Milligan, Product Marketing Manager at Endace Systems: heath.milligan@endace.com, or the Endace office nearest to you. During FOSE, March 20-22, 2007, visit booth #523.
