

# EndaceProbe 124 Series

EndaceProbe™ 124 Series Analytics Platforms provide 100% accurate Network History recording and Playback™ on up to four 1/10GbE links or one 40GbE link.

The EndaceProbe 124's compact short-depth form factor allows it to be deployed in either half-depth or full-depth racks as required. With 3.84TB of storage, it is ideal for monitoring 1/10/40GbE links at branch offices or other edge locations.

Smart Truncation™ and compression enable effective storage depth of more than 7 Terabytes.

Application Dock™ allows your choice of security and performance monitoring and analytics applications to be hosted directly on the EndaceProbe. Hosted applications can access live traffic for real-time analysis or, using Playback, recorded traffic for back-in-time analysis.

Multiple EndaceProbes can be seamlessly connected to form a scalable, centrally managed recording fabric with capacity for Petabytes of network history storage.

## 100% Accurate Recording

Dedicated hardware provides lossless capture with nanosecond accurate timestamping

- Smart Truncation auto-truncates encrypted or non-compressible packets to maximize storage
- Definitive evidence for quickly and accurately resolving security threats and network or application performance problems

## Network History Playback

Playback Network History on-demand to hosted or external analytics tools

- Playback quickly for targeted scans or slowly for deep investigation
- Playback to real-time analytics tools for historical analysis
- Mine network history, extract and download packet capture files for manual analysis.

### PERFORMANCE<sup>1</sup>

	<b>Write to disk</b>	1Gbps sustained >2500ms microburst @ 4Gbps >300ms microburst @ 40Gbps
	<b>Maximum Flow Creation Rate</b>	20k flows/sec
	<b>Maximum Concurrent Flows</b>	200k
	<b>Number of Application Dock Instances</b>	2
	<b>Storage depth</b>	Native 3.8 Terabytes Packets <sup>2</sup> > 7 Terabytes
	<b>Physical size</b>	1RU short-depth, compact form factor

<sup>1</sup>For more information about real-world performance testing refer to our "Network Recorder Performance Measurement" whitepaper.

<sup>2</sup>Effective packet storage accounting for RAID and metadata overheads and assuming a 2:1 ratio for compression and Smart Truncation of packet data

### BENEFITS

#### 100% Accurate

On demand access to 100% accurate, rich network history provides conclusive evidence for investigations.

#### Powerful

Automation and streamlined workflow integration enables faster investigations. This improves security and reduces the impact of network and application performance issues.

#### Open

Integrating commercial, open source and custom applications provides unified access to a single authoritative source of network history.

Analytics Function Virtualization (AFV) reduces CAPEX and OPEX through hardware consolidation which improves efficiency and increases agility.

#### Scalable and Reliable

EndaceProbes are engineered for ultra-high reliability, longevity and security. Centralized management enables scalability and reduces OPEX costs.

## Built-In Investigation Tools

- Analyze Network history with EndaceVision™, a powerful, browser-based traffic analysis tool
- Decode packets without download using EndacePackets, a browser-based packet analyzer based on Wireshark
- Analyze to microsecond level with Microvision
- Application classification for 1200+ applications

## Provenance Enriched History

Provenance™ augments recorded network history with rich contextual data.

- Self-describing packet traces support Big Data analysis, improve post-event problem resolution and simplify archiving
- Rich evidential trail for effective legal prosecution.

## Workflow Integration

Rich APIs provide integration with commercial, open source and custom applications.

- Pivot directly from alerts in 3rd -party applications to view related packets of interest in EndaceVision™ with Pivot to Packets
- Automate archival of packet traces with Pivot to Packets.

## Host Virtual Analytics

Host third-party analytics applications and give them access to real-time and recorded traffic.

- Central orchestration for fast, easy deployment.
- Enable analytics functions on-demand to meet new requirements
- Analyze network history without centralizing petabytes of data.

## Fusion Partner Program

Our market-leading, cybersecurity and network monitoring partners use EndaceProbe's API integration and Application Dock™ VM hosting to connect their solutions directly to Network History.

- Streamline and automate detection and investigation
- Choose from industry-leading security and performance solutions
- Shared access to a common, authoritative source of network history for all applications.

## EndaceProbe 124 Series – Technical Specifications

Monitoring ports	4 x 1/10GbE or 1 x 40GbE optical
Management interfaces	2 x 1GbE, 1 x IPMI
Time synchronization	1 configurable as either 1PPS or IRIG-B
Size	1U 19 inch rack mount - "short depth" compact form factor
Dimensions	Height: 43.2mm (1.7") Width: 437mm (17.2") Length: 249mm (9.8")
Weight	3.62kg (8lbs)
Power supply	200W AC
Maximum power consumption	200W
Operating temperature	10-35°C (50-95°F)
Operating humidity	8-90% non-condensing
Maximum heat load	376 BTU/hr

## Companion Products

A wide range of fiber optics and electrical transceivers is available. See [endace.com/accessories](http://endace.com/accessories) for details.
